

Trinity Hotel Manager

THM is our on-demand solution for the management of hotels, resorts, booking agencies, residences and other touristic structures.

It can manage reservations of rooms and apartments with sophisticated rules of priority and can be integrated with an existing or new web site from where users can check for availability, send a reservation request and - optionally - complete the transaction on line, including final payment.

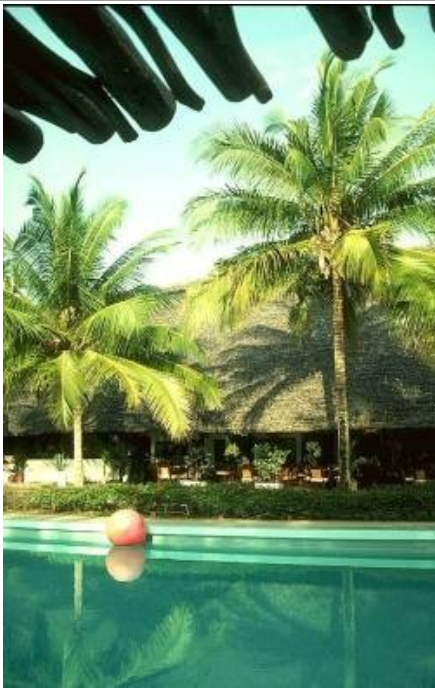

THM is a real management system: not only it can be used for web booking but also to manage reservations made via phone or other means, keeping trace in real-time of the status of all the reservations, current and historical, including client data and extra costs.

Features:

- Unlimited number of rooms / apartments
- Automatic assignment of the apartments according to user-defined rules. Rooms can be assigned to homogeneous groups and reservations can be made not to a single room but to the group: the system arranges reservations inside the group automatically in order to maximize occupancy and assign the client a room inside the group.
- Complete management of extra costs on a daily or fixed percentage basis
- Automatic generation of rent contracts for residences or agencies
- Multi-user system with differentiated privileges for each user. This feature can be used for instance to give different employees with different roles access to the database. The administrator can decide if a user can insert reservations or only extra costs, for which rooms and in which periods
- Multi-language support

- Flexible pricing based on year periods including discount and promotions, special client categories or tour operator conventions

- Extra cost management (i.e. room bar, parking, room cleaning, pool, sat TV etc). Extra costs can be applied on a daily basis or once per reservation period, and with a fixed price or on a percentage basis. More, the extra cost can depend on the number of persons in a room
- VAT calculations can be made automatically by the system
- Offered in ASP mode, nothing to install whatsoever, only an Internet connection is required
- Licence cost based on the number of rooms / apartments
- We guarantee the security of your data thanks to our secure data center, SSL crypto

connections, daily backups and disaster recovery plans. We actually offer you a complete outsourcing solution

THM is part of our software services range and can be integrated with them:

Trinity Enterprise Portal - dynamic web site

Trinity Guardian - IP Videosecurity solution

Trinity VirtualView - interactive webcam video touristic promotion

StudioAG - ICT Consulting & Engineering
